

2022 4-YEAR REVISION RISK FOR THA STEM/CUP COMBINATIONS

M A R C Q I

The MARCQI annual report is based on 139,970 hip cases. 8% of these cases are revisions. Of primary hip cases, 97% are conventional, 2% are conversions, and 1% are resurfacing.

MARCQI Overall (2.49%)

Shaded bars represent the 95% confidence intervals of the percent of primary cases having a revision surgery within four years. The full MARCQI annual report includes age and sex-adjusted hazard ratios, full cumulative percent revision curves (to 5 years), number at risk, reasons for revision, and volume information for each of these implant combinations.

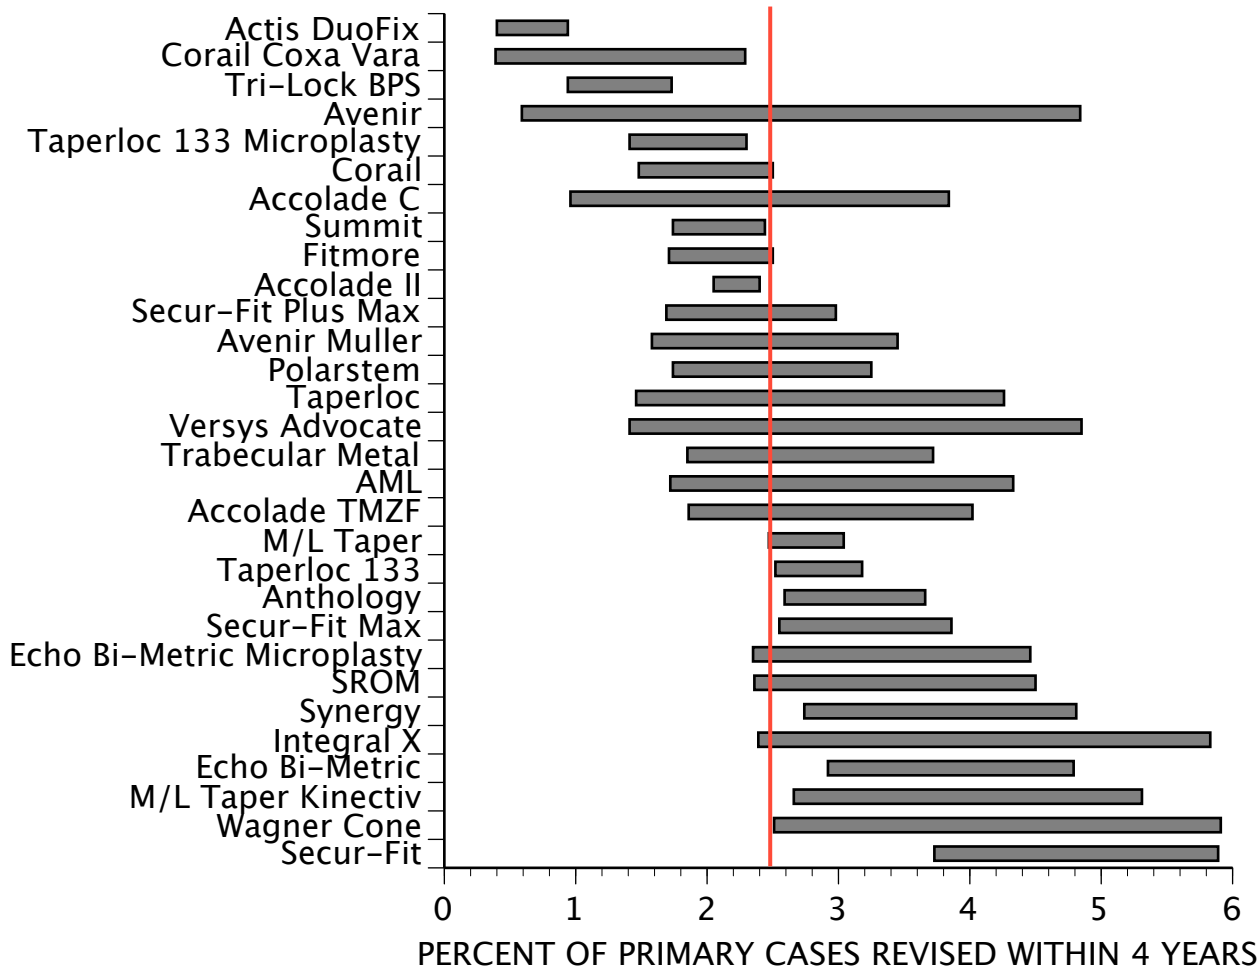

Inclusion criteria for this figure: (1) at least 500 cases in MARCQI database, (2) at least 250 cases at risk at 1 year, and (3) implant must be conventional.
