

This dictation tool is designed to aid in completely recording pertinent MARCQI intraoperative data. Please include the following information in your operative report or brief operative note.

PRE-OP DIAGNOSIS:

REASONS FOR REVISION:

- Joint Infection
- Malalignment
- Aseptic Loosening
- Metal Reaction/Metallosis
- Osteolysis
- Implant Failure
- Instability/Dislocation
- Peri-prosthetic fracture – Femur or Tibia
- Patellofemoral Joint
- Conversion of Unicompartmental Knee Arthroplasty
- Extensor mechanism failure

POST-OP DIAGNOSIS:

PROCEDURE PERFORMED:

- Primary Total Knee Arthroplasty
- Revision Knee Arthroplasty
- Unicompartmental (Medial Condyle)
- Unicompartmental (Lateral Condyle)
- Isolated Patella Femoral Replacement
- Bicompartmental Knee Arthroplasty
- Revision Isolated Patella

PATELLA STATUS:

- Removed
- Replaced
- Resurfaced

ANESTHESIA:

- Block
- Spinal
- General
- Local
- Epidural

APPROACH:

- Lateral Parapatellar
- Medial Parapatellar
- Mid-Vastus
- Sub-Vastus
- Other (Explain)

OPTIONAL TECHNIQUES:

- Computer Assisted
- Custom Implants

- Prefabricated Blocks
- Robotic Surgery (Cori, Mako, Navio, Omnibotic, Orthotaxy, Robodoc, Rosa, Other)

INTRA-OP COMPLICATIONS:

- Fracture
- Tendon/Ligament
- Vascular Injury
- Nerve Injury
- Other (Explain)
- None

METHOD OF IMPLANT FIXATION:

- Cemented / Uncemented
 - Femoral
 - Tibial
 - Patellar

CEMENT – OTHER USE:

- Build-up of bony defect
- Antibiotic beads
- Other (Explain)

ANTIBIOTICS ADDED TO CEMENT:

- Indicate if added by Surgeon or Manufacturer
- List all antibiotics used

ANTIBIOTIC *POWDER* INTRODUCED INTO THE JOINT SPACE:

- Yes
- No

SOLUTION USED TO IRRIGATE:

- Antibiotic solution
- CHG – containing solution
- Povidone-Iodine
- Normal Saline without additives
- Other (Explain)

TXA:

- IV
- Oral
- Topical

PROCEDURE DETAILS: (DICTATE YOUR REPORT)
