

2023 10-YEAR THA REVISION RISK FOR STEM/CUP COMBINATIONS

2023 10-YEAR THA REVISION RISK FOR STEMS

* indicates that M/L Taper Kinectiv is not included.

Shaded bars represent the 95% confidence intervals of the percent of primary cases having a revision surgery within ten years. The full MARCQI annual report includes age and sex-adjusted hazard ratios, full cumulative percent revision curves, number at risk, reasons for revision, and volume information for each of these implant combinations.

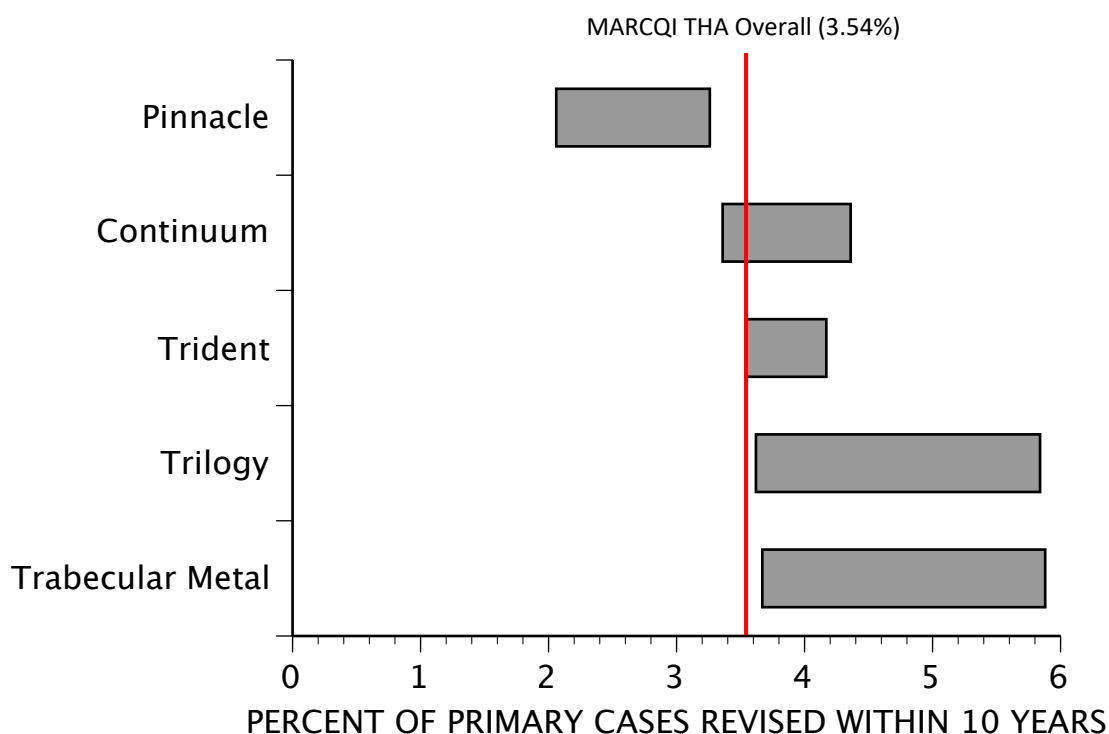

Inclusion criteria for this figure: (1) at least 500 cases in MARCQI database, and (2) at least 100 cases at risk at ten years.
